- World Class Executive Team

Industry Shift

With the digitization of information and the utilization of the internet, once separate industries are emerging to a universal medium for data distribution. Cable TV and mobile providers are continually shifting to internet protocol to offer a larger array of services to satisfy consumer needs.

TIIPTVG's P2P technology has been developed for seamless implementation within cable television providers', mobile operators' and internet video providers' existing infrastructures. With the utilization of this technology, companies such as HULU.com can offer premium video content to cable, mobile, and internet subscribers with a single solution while substantially cutting costs. The solution includes a Live and VOD P2P system of video and data distribution for cable, mobile, and internet providers, along with VOD and Live video transcoding for 3G mobile operators.

Furthermore, P2P technology for the distribution of Flash video and a transcoding system for mobile phones has been developed and successfully tested.

Pre-Funding Business Operations, Peripheral Projects

Within the **Video Portal/Web Broadcast** industry, Any-Vue Networks Limited has made it to the final round of proposal selection among 3 vendors for a China based International diversified entertainment Holdings Company that has over 1 billion USD annual revenue. Any-Vue is also proposing the implementation of the patented P2P/CDN hybrid to cut distribution costs for proprietary client-server video portal.

Any-Vue has created and implemented live Internet broadcast solutions for local and international theological organizations. Any-Vue is also currently developing a Web broadcast solution for a financial services firm with ambitions to establish a web –

based finance channel.

Working with **VideoCodec/Transcoder** technologies, Any-Vue is partnering with industry distributors to implement various solutions. Any-Vue implemented a web-video (FlashVideo) to mobile video (3G) transcoder for an industry leading firm. Any-Vue 3G transcoder solution is being implemented in numerous peripheral projects, and is being considered for nationwide implementation by the leading telecommunication firm in the region.
